[Date]

Dear [Name],

I'd like to apply for the [Role] role at [Company]. [Why this company — one specific sentence.]

I'm the sole engineer on a retail group's mobile commerce platform: I built the Flutter app for iOS and Android, the API layer into the Odoo ERP behind it, the payment, delivery and mapping integrations, and the CI/CD and Linux deployments it runs on. I took it through App Store and Google Play review; two weeks after launch it had 3,400 active users, 2,100 of them returning.

I had never written a line of Dart when I started. Nine months, no senior engineer to ask, and a deadline — so I learned mobile and shipped it. I pick up whatever a product needs rather than waiting for the work to match my CV.

Before that I was a frontend developer in a cross-functional team at RF Laiyon, shipping features on national government platforms used across Malaysia, including the system government schools use to order textbooks nationwide.

My CV is attached and my work is at khaled-portfolio-lyart.vercel.app. I'd be glad to talk.

[Optional, for roles abroad: I'm based in Kuala Lumpur and would need visa sponsorship to join you in [country]. Happy to walk through timelines.]

Best regards,

Khaled Alsanafi
