

Khaled Alsanafi

Software Engineer — Full-Stack, Mobile & Platform

Kuala Lumpur, Malaysia +60 12-945 2506 khaledalsanafi101@gmail.com github.com/sansRebel LinkedIn Portfolio

Profile

Software engineer who takes products from architecture to production and owns every layer in between. Joined a retail group as a web developer and, within nine months, designed, built and launched their mobile commerce platform single-handedly — a Flutter app on iOS and Android, the API and ERP layer behind it, payment and delivery integrations, and the CI/CD and Linux infrastructure it runs on. Previously shipped production features on national government platforms inside a cross-functional agile team.

Experience

Software Engineer at **Deltagulf (Nurmart), Kuala Lumpur** [App Store](#) [Google Play](#) Jan 2026 – Present
Sole engineer on the company's mobile commerce platform, from first commit to live production.

- **Launch and traction.** Took the app through App Store and Google Play review to launch across two retail branches; **3,400 active users and 2,100 returning users in the first two weeks**, averaging **16m 53s engagement per active user** and 2.5 engaged sessions per user.
- **Mobile, learned on the job.** Built the iOS and Android app from scratch in Flutter/Dart with no prior mobile experience — accounts, catalog, search, cart, checkout, orders, addresses, promotions and loyalty.
- **Backend and ERP.** Designed the API layer between app and Odoo ERP serving **3,000+ products** with multi-branch inventory, orders, promotions and loyalty; extended Odoo modules and workflows in Python so app orders flow straight into inventory and fulfilment.
- **Integrations.** Connected Fiuu payments, Lalamove delivery, Google Maps/Places/Geocoding and Apple and Google sign-in into one flow from search to doorstep.
- **Infrastructure and release.** Built GitHub Actions CI/CD, ran Linux server deployments, owned signing and store submissions, and handled production incidents across app, backend and infrastructure.
- **Data-driven iteration.** Instrumented the app with Firebase Crashlytics and Google Analytics, using crash and behaviour data to prioritise post-launch fixes.
- **Stakeholder delivery.** Translated retail, payment and delivery requirements from management into shipped features, working directly with operations across both branches.
- **AI-assisted engineering.** Build with Claude Code and Cursor, routing between frontier and open-weight models to balance output quality against cost, reviewing and testing every generated change before release.

Frontend Developer at **RF Laiyon Interactive, Cyberjaya** Apr 2024 – Sep 2024
Full-time engineer in a cross-functional product team building national government platforms used across Malaysia.

- **National scale.** Delivered production features for eSPBT, the system Malaysian government schools use to order textbooks nationwide, taking work from sprint ticket to release.
- **Public sector.** Built and maintained Ihsan Madani, a national platform giving citizens visibility into social welfare programmes.
- **Component architecture.** Engineered reusable, accessible React and TypeScript components on Chakra UI, wired to backend REST APIs and shared across product modules.
- **API contracts.** Defined and validated API contracts with backend engineers in Postman, catching integration issues before they reached production.
- **Team delivery.** Full member of a cross-functional agile team across weekly sprints — planning, stand-ups, peer code review and release.

Selected Projects

NextEndeavour Next.js, Node.js, Dialogflow [nextendeavor.vercel.app](#)
NLP chatbot that maps a user's skills and interests to real career paths through custom Dialogflow intents.

VerseVault Next.js, TypeScript, MongoDB, Cloudinary [the-versevault.vercel.app](#)
Blogging platform with authentication, post editing, image uploads, likes and comments over REST APIs.

Skills

Languages	TypeScript, JavaScript, Dart, Python, C#, SQL
Frontend & mobile	React, Next.js, Flutter, Tailwind CSS, Chakra UI
Backend & ERP	Node.js, Express.js, .NET MVC, REST APIs, OAuth, Odoo
Data & cloud	PostgreSQL, MongoDB, AWS (EC2, Elastic Beanstalk, RDS), Linux
DevOps & testing	GitHub Actions, CI/CD, Jest, Postman, Git
Monitoring	Firebase Crashlytics, Google Analytics
AI engineering	Claude Code, Cursor, frontier and open-weight LLMs, cost-aware model routing

Education

MSc by Research, Software Engineering
Multimedia University (MMU), Cyberjaya
In progress

BSc (Hons) Software Engineering
Asia Pacific University, Kuala Lumpur
2022 – 2025

Languages

Arabic (native), English (fluent), Spanish (basic)
